CKA - Course Presentation

Prerequisites

Hardware

- One computer (MacOS, Linux, Windows™ or Solaris™),
- AZERTY FR or QWERTY US keyboard,
- 4 GB RAM minimum,
- 2-core processor minimum,
- Headphones or earphones,
- A microphone (optional).

Software

- Web Chrome version 72+ or
- Microsoft Edge version 79+ or
- Firefox version 65+.

Internet

- **Fast** Internet access (4G minimum) **WITHOUT** using a proxy,
 - **Unblocked** access to ports 80 and 443 at: <https://ittraining.trainercentralsite.com/#/home> and *.ittraining.team.
-

Curriculum

- **DOE301 - Creating Kubernetes clusters**

- Container Orchestration
- Introduction to Kubernetes (k8s)
 - Control Plane
 - Controller
 - Nodes (Minions)
- LAB #1 - Creating a Kubernetes cluster with Virtual Machines
 - 1.1 - Overview
 - 1.2 - Connecting to the kubemaster
 - 1.3 - Testing the network
 - 1.4 - Initializing the Cluster Controller
 - 1.5 - Installing a Network Extension for communication between PODs
 - 1.6 - Connecting workers to the Controller
 - 1.7 - K8s and High Availability
- LAB #2 - Creating a Kubernetes cluster with Minikube
 - 2.1 - Introducing Minikube
 - 2.2 - Installing Minikube
 - 2.3 - Configuring Minikube
 - 2.4 - Installing Docker
 - 2.5 - Installing kubectl
 - 2.6 - The minikube addons command
 - 2.7 - The minikube dashboard addon

- **DOE302 - Managing Pods, Replication Controllers, ReplicaSets, Deployments, Maintenance and Cluster Updates**

- LAB #1 - Creating a pod
 - 1.1 - Introducing a pod
 - 1.2 - Manual pod creation
 - 1.3 - Creating a pod using a YAML file
 - apiVersion
 - kind
 - metadata

- spec
 - Using the YAML file
- LAB #2 - Using Replication Controllers and ReplicaSets
 - 2.1 - Replication Controllers
 - Overview
 - Implementation
 - 2.2 - ReplicaSets
 - Overview
 - Implementation
- LAB #3 - Deployment management
 - 3.1 - Overview
 - 3.2 - Implementation
 - Rollouts
 - Rolling Updates
 - Rollbacks
- LAB #4 - Maintenance
 - 4.1 - The drain command
 - 4.2 - The uncordon command
- LAB #5 - Managing Cluster Updates
 - 5.1 - Updating kubeadm
 - 5.2 - Updating Workers
- **DOE303 - The kubectl, krew and kustomize commands**
 - LAB #1 - Using the kubectl command
 - 1.1 - Getting help with kubectl commands
 - 1.2 - Obtaining information about the Cluster
 - The version command
 - The cluster-info command
 - The api-versions command
 - The api-resources command
 - 1.3 - Obtaining information about nodes
 - The describe node command
 - The top command
 - 1.4 - Obtaining information about Pods

- The describe pod command
 - The top command
- 1.5 - Working with the kubectl command
 - The apply command
 - The create command
 - The get command
 - Using Options
 - The exec command
 - Imperative commands
- LAB #2 - Managing kubectl plugins with the krew command
 - 2.1 - Installing krew
 - 2.2 - Viewing the list of plugins
 - 2.3 - Installing and using plugins
 - 2.4 - Updating and deleting plugins
- LAB #3 - Managing patches with the kustomize command

- **DOE304 - Working with Pods and Containers**

- LAB #1 - Application Configuration
 - 1.1 - Overview
 - 1.2 - Creating a ConfigMap
 - 1.3 - Creating a Secret
 - 1.4 - Using ConfigMaps and Secrets
 - Using Environment variables
 - Using Configuration Volumes
 - LAB #2 - Container Resource Management
 - 2.1 - Overview
 - 2.2 - Resource Requests
 - 2.3 - Resource Limits
 - LAB #3 - Container supervision
 - 3.1 - Overview
 - 3.2 - Liveness Probes
 - The exec Probe
 - The httpGet Probe
 - 3.3 - Startup Probes
-

- 3.4 - Readiness Probes
- LAB #4 - Restart Policy Management
 - 4.1 - Overview
 - 4.2 - Always
 - 4.3 - OnFailure
 - 4.4 - Never
- LAB #5 - Creating Multi-container Pods
 - 5.1 - Overview
 - 5.2 - Implementation
- LAB #6 - Init containers
 - 6.1 - Overview
 - 6.2 - Implementation
- LAB #7 - Scheduling
 - 7.1 - Overview
 - 7.2 - Implementation
- LAB #8 - DaemonSets
 - 8.1 - Overview
 - 8.2 - Implementation
- LAB #9 - Static Pods
 - 9.1 - Overview
 - 9.2 - Implementation

- **DOE305 - Network, Service and Microservices Architecture Management**

- LAB #1 - Network and Service Management
 - 1.1 - Overview of Network Extensions
 - 1.2 - DNS K8s
 - Overview
 - Implementation
 - 1.3 - Network Policies
 - Overview
 - Implementation
 - 1.4 - Services
 - Overview
 - Implementation

- The NodePort service
 - The ClusterIP service
- 1.5 - Services and the K8s DNS
 - Overview
 - Implementation
- 1.6 - K8s Ingress management
 - Overview
 - Implementation
- LAB #2 - Microservices Architecture Management
 - 2.1 - Overview
 - 2.2 - Creating Deployments
 - 2.3 - Creating Services
 - 2.4 - Deploying the Application
 - 2.5 - Scaling Up

- **DOE306 - Managing Volumes with Kubernetes**

- Overview
 - Volumes
 - Persistent Volumes
 - Volume Types
- LAB #1 - Using K8s Volumes
 - 1.1 - Volumes and volumeMounts
 - 1.2 - Sharing volumes between containers
- LAB #2 - Persistent Volumes
 - 2.1 - Storage Classes
 - 2.2 - Persistent Volumes
 - 2.3 - Persistent Volume Claims
 - 2.4 - Using a PersistentVolumeClaim in a pod
 - 2.5 - Resizing a PersistentVolumeClaim

- **DOE307 - Troubleshooting K8s**

- LAB #1 - The API Server
 - 1.1 - Connection Refused
 - 1.2 - System Pod Logs
 - LAB #2 - The Nodes
-

- 2.1 - NotReady Status
- LAB #3 - Pods
 - 3.1 - The ImagePullBackOff Error
 - 3.2 - The CrashLoopBackOff Error
- LAB #4 - Containers
 - 4.1 - The exec Command
- LAB #5 - Networking
 - 5.1 - kube-proxy and DNS
 - 5.2 - The netshoot Container

- **DOE308 - Introduction to Securing K8s**

- LAB #1 - Role Based Access Control and TLS Certificates
 - 1.1 - Overview
 - 1.2 - The /etc/kubernetes/manifests/kube-apiserver.yaml File
 - 1.3 - Creating a serviceAccount
 - 1.4 - Creating a User
 - 1.5 - TLS Certificates
- LAB #2 - Pod Security Implementation
 - 2.1 - Overview
 - 2.2 - Kubernetes Security Context
 - 2.3 - Kubernetes Network Policies
 - 2.4 - Kubernetes Resource Allocation Management

- **DOE309 - Package Management for Kubernetes with Helm**

- Overview
 - LAB #1 - Working with Helm
 - 1.1 - Installing Helm
 - 1.2 - The helm search hub Command
 - 1.3 - Searching the Artifact Hub
 - 1.4 - Adding and Deleting a Repository
 - 1.5 - The helm search repo Command
 - 1.6 - The helm show Command
 - 1.7 - Installing a Chart
 - 1.8 - The helm get Command
 - 1.9 - Using NOTES
-

- 1.10 - The helm upgrade Command
 - 1.11 - The helm history Command
 - 1.12 - The helm rollback Command
 - 1.13 - The helm uninstall Command
 - LAB #2 - Monitoring Kubernetes with the EFK Stack
 - 2.1 - Overview
 - 2.2 - Installing the elasticsearch Chart
 - 2.3 - Installing fluentd-elasticsearch Chart
 - 2.4 - Installing the kibana Chart
 - 2.5 - Generating Logs in Kubernetes
 - 2.6 - Visualizing Data with Kibana
 - **DOE310 - Exam - Acquired knowledge**
 - 60 questions from a pool of 104 questions
-
